

ARTIFACT SHEET

Enter artifact number below. Artifact number is application number + artifact type code (see list below) + sequential letter (A, B, C ...). The first artifact folder for an artifact type receives the letter A, the second B, etc.. Examples: 59123456PA, 59123456PB, 59123456ZA, 59123456ZB

08428918 BA

Indicate quantity of a single type of artifact received but not scanned. Create individual artifact folder/box and artifact number for each Artifact Type.

The Commissioner of Patents
and Trademarks

*Has received an application for a patent
for a new and useful invention. The title
and description of the invention are en-
closed. The requirements of law have
been complied with, and it has been de-
termined that a patent on the invention
shall be granted under the law.*

Therefore, this

United States Patent

*Grants to the person or persons having
title to this patent the right to exclude
others from making, using or selling the
invention throughout the United States
of America for the term of seventeen
years from the date of this patent, sub-
ject to the payment of maintenance fees
as provided by law.*

[57] ABSTRACT

A hand held fly swatter apparatus is provided which is capable of being configured to capture insects alive from given surfaces to allow their subsequent disposal. The apparatus includes a flexible handle having a transparent rigid housing attached to a front end thereof. The housing defines an insect trap compartment having a large aperture through which an insect is placed within the insect trap compartment. The housing provides a pair of parallel channels which extend along opposite sides of the compartment aperture and are arranged to support a front end portion of a mesh closure member. The mesh closure member is slidable between a retracted position to permit access to the insect trap compartment, and an extended position wherein the mesh closure member covers the compartment aperture. A rear slide clamp attached to a rear end portion of the mesh closure member supports the closure member relative to the handle. Bumpers are provided to limit movement of the mesh closure member between the defined retracted and extended positions. The housing and the mesh closure member, in its extended position, cooperatively provide a fly swatter.
